DIAMOND CURE UV PROCESS

DIAMOND CURE is an Ultra-Violet Curable Process Series.

DIAMOND CURE UV inks have been formulated with advanced technology to provide maximum press performance and transfer.

DIAMOND CURE UV inks have gloss levels far superior to what is currently available.

DIAMOND CURE UV inks are formulated with a tack level that performs satisfactorily on both coated and uncoated papers. (Special stocks, such as thermal imaging papers, should be evaluated.)

DIAMOND CURE UV inks have outstanding lithographic water balance.

DIAMOND CURE UV inks are suitable for use in "Hybrid" press installations. This series is trap-rated for KCMY rotation.

DIAMOND CURE UV inks are packaged in a 5# black plastic container, 10# black plastic gallon container or 40# black plastic kits. These containers offer an improved shelf life. **To ensure optimum performance this product should be used within 6 months.**

PRE-TESTING ON ACTUAL SUBSTRATE IS ALWAYS RECOMMENDED

Due to the many variables in the printing process which are beyond the control of the ink maker, and the different types of laser equipment employed, we cannot assume any responsibility for the final outcome of the printed job.
