EP UV COATABLE

EARTH PRIDE inks were developed with the environmentally conscious printer in mind. Manufactured with a special blend of various vegetable oils, including some soy oil, **EARTH PRIDE** inks offer reduced VOC's (Volatile Organic Compounds).

EARTH PRIDE UV COATABLE inks are designed for the commercial and folding carton printer. They offer high gloss on a variety of carton, label and board substrates. They work well on a wide variety of substrates, including synthetic (plastic) and foil stocks. (Always pre-test on actual substrate)

EARTH PRIDE UV COATABLE inks contain bleed resistant pigments to meet the requirements of printing designed to be solvent laminated, UV coated, aqueous coated, or foil stamped.

Due to the nature of the automotive-type pigments used in the **EARTH PRIDE UV COATABLE**, some inks matched with these special pigments may not match perfectly to the Pantone Color Guide or to custom blended color swatches.

EARTH PRIDE UV COATABLE inks have exceptional press stability and provide excellent scuff and rub resistance.

EARTH PRIDE UV COATABLE inks are press ready - additives are rarely necessary. Litho Dry (601V12342) is the recommended press-side drying additive (use: 1/4 to 1/2 ounce per pound of ink if necessary)

EARTH PRIDE UV COATABLE inks have a medium tack and viscosity.

EARTH PRIDE UV COATABLE inks produce clean, dense prints with little picking. Their moderate lightfastness makes them ideal for folding carton and label applications.

EARTH PRIDE UV COATABLE inks can be used in many Laser printing applications. Refer to our "Laser Bulletin" for printing procedures and recommendations.

PRE-TESTING ON ACTUAL SUBSTRATE IS ALWAYS RECOMMENDED

Due to the many variables in the printing process which are beyond the control of the ink maker, and the different types of laser equipment employed, we cannot assume any responsibility for the final outcome of the printed job.
