- **ULTRA PROCESS** inks are one of the latest development from Braden Sutphin Ink Company.
- **ULTRA** is a 4/C process series that offers a dot formation similar to Opti-Dot for print sharpness.
- **ULTRA PROCESS** inks are trap rated - designed to print Black, Blue, Red, Yellow.
- **ULTRA** is a moderately fast work & turn series that prints well on a wide variety of stocks.
- **ULTRA PROCESS** inks have excellent press stability and dry to a harder film than Opti-Dot.
- **ULTRA PROCESS** inks minimize problems associated with long make readys.
- **ULTRA** is a strong process series that produces exceptional mileage and is suitable for use on both long and short runs.
- The blanket release is exceptionally good with **ULTRA PROCESS**, which reduces picking and piling, even in light coverage areas.
- You can depend upon **ULTRA PROCESS** for many of your printing requirements.
- **ULTRA PROCESS** inks are UV Coatable under many different conditions. **PRE-TESTING** under the same conditions the job will run is very important.
- When coating, foil stamping or overprint varnishing **ULTRA PROCESS** inks we recommend caution when using infrared heaters. The heat could cause a chemical reaction and the inks might not accept a coating, foil stamp or overprint varnish.
- Packaged in Vacuum Packed Cans.

PRE-TESTING ON ACTUAL SUBSTRATE IS ALWAYS RECOMMENDED

Due to variations in stocks and other variables inherent in the printing process, which are beyond the control of the ink maker, we cannot assume any responsibility for the final outcome of the printed job.
